

## Annexure

### 1. Background:

The hackers find new ways and means to steal information. It is very important to create a culture of consistent awareness of threats. Cyber-attacks come in many different forms and are always evolving, so Participants need to be kept up to date on what to look out for. Creating a security culture within financial market infrastructure is one of the key focuses of NSDL. Collectively, we all need to ensure that everyone in the ecosystem is aware of the potential threats we could face, whether it's unsecure code, phishing email, sharing passwords, unpatched workstations or using an insecure network. We have to stay on top of the latest cyber threats that look to exploit the human element, the technology weaknesses or broken processes.

With a few strokes on a keyboard, hacker organizations, organized crime and rouge individuals can launch a cyber-attack from anywhere; at any time possibly disrupting and damaging business.

On **June 12, 2019**, NSDL is organizing a full day workshop to present a holistic perspective on cyber security with a global standpoint. Live on stage, we'll demonstrate the latest attack methods and present tangible action plans to secure your data and IT infrastructure. We are delighted to invite you for the Workshop.

The detailed itinerary is as mentioned below:
